

Do you need *Capped?*

The Problem:

More than 50% of the air you breathe inside your home rises directly from the crawl space. High humidity in the soil and air releases destructive water vapor, which rises from the crawl space and into your entire home. Additionally, most crawl spaces have vents, which allow outside air into the space. This air is damp and carries mold spores and musty odors, providing the perfect environment for insects, other pests, and wood rot.

The Solution:

WhiteCap is a durable, professional grade crawl space liner that serves as a vapor barrier system with poly-cord reinforcement and an anti-microbial additive manufactured right into the material. **WhiteCap encapsulates the crawl space, isolating the home from the damp earth to stop destructive moisture.** It protects you from water intrusion, mold, rodents, insects, wood rot and musty odors... providing a safe, clean space for storage.

If you have a wet, dirty crawl space, *WhiteCap can help!*

Crawl Space Liner Benefits Include:

- Provides insulation and air sealing
- Performs better than fiberglass
- Non moisture-absorbing
- Energy-efficient
- Long-lasting
- Heavy duty
